Our Story

Securicore grew out of a small basement office in 2003 and has grown into a boutique IT Security and Network Solutions company with thousands of customers across Canada. Our journey began with a focus on solving the pervasive issue of email spam, leading to our partnership with Barracuda Networks, an initially unknown vendor. This collaboration marked a turning point, and we've since become one of their top partners in North America, and the top partner in Canada.

We pride ourselves on working with agile, responsive vendors, offering simple, effective, and affordable solutions that have passed our rigorous testing. Our customer-centric approach and commitment to quality, have been instrumental in our growth and we're grateful to our clients and vendors for being part of our story.

Professional Services

For seamless deployment, our vendor-certified experts handle everything: pre-deployment, installation, handover / training, sharing best practices and post deployment support.

Our service includes:

- ✓ Infrastructure review and pre-installation planning call
- ✓ Best practices overview
- ✓ Onsite or Remote configuration
- ✓ Knowledge transfer / training with a final hand-off
- ✓ Post Installation support services

WI-FI Predictive Planning and Validation Service

A predictive WLAN survey is a cost-effective alternative to a physical APoS onsite survey and is nearly as accurate if all site information is captured accurately. It saves time and money, allowing quicker project starts. Predictive planning reports offer the following benefits:

- ✓ Fraction of the cost of physical Wi-Fi survey
- ✓ Helpful in estimating the costs of the wireless and switching hardware
- ✓ Provides your network cabling team with information for cable runs
- ✓ Provides a baseline to validate with an actual onsite survey

We also offer an onsite post deployment WiFi validation survey.
